# 100% Cotton Face Fleece

Fleece has become a year-round purchase and many customers ask about the hassle-free 100% cotton face fleece options S&S Activewear has available. We currently offer seven different fabric weight options spread over seven brands - Alternative, Independent Trading Co, Tultex, LAT, BELLA CANVAS, Russell Athletic, and LAT.

S&S activewear offers the largest selection of tight-knit 100% cotton face yarn fleece. There are many advantages of printing on this type of fabrication which is why you see many of our brands offering it right now.

**What makes rings-spun 100% cotton face fleece so unique?** The solid colors have been specifically designed to have the most smooth and stable fabric surface for printing, especially for discharge inks and DTG. The lack of polyester removes the stress of worrying about dye migration that can occur with some 50/50 blended fleece that is offered.

***Please note that 100% cotton face yarn is only available on the solid color options***

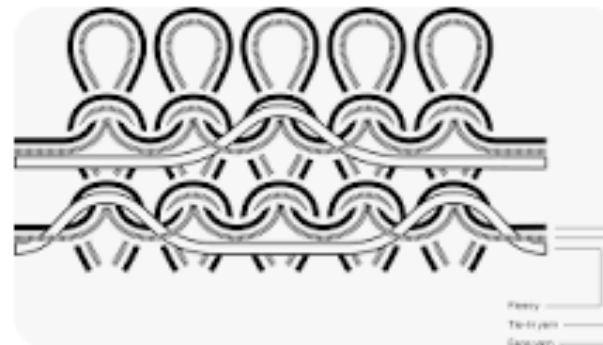

# Creating a 100% Cotton Face: Three-End Fleece vs. Two-End Fleece

Three-end fleece has a third tie yarn that creates a barrier between the front or “facing” of the fleece and the backing of the fleece. If a pullover hood, for example, has a blend of 80% cotton and 20% polyester and is a three-end, the facing of the garment is 100% cotton (for solid colors). While decorating a three-end pullover hood, the poly will not come through the facing of the garment. The third tie yarn protects it. Factories that produce three-end fleece need a special machine to weave this type of fabric.

Two-end fleece can also have a 100% cotton facing, but without the third tie yarn, the facing is not fully protected from the interior blend. Therefore, possible issues with poly come through the garment's facing. Two-end fleece tends to be a more price point fleece. Informing customers, especially printers, of this feature is beneficial so they can make necessary decorating adjustments. There have been issues with discharge on the two-end fleece, but most often is still a viable option.

Three-end fleece tends to be a loftier fleece that allows printers to decorate with ease and fewer issues, especially when using discharge. The third tie yarn fills the open areas that would typically gap on two-end yarn. Gaps not only allow poly in the blend to come through but can fill with ink. The extra layer of protection on three-end fleece ensures printing is only on the fleece surface versus the ink slipping into the gaps found on two-end fleece. In short, three-end fleece is excellent for discharge printing because it is only on a protected surface.

**Example:** Three-end fleece showing the barrier that the third tie yarn creates for the garment.
