

## Facility Products & Clean Guide

Cleaning Protocols and Resources For Facilities, Hospitality, Resorts and Spas

IN PARTNERSHIP WITH

## STRONG BODY/STRONG MIND

From the professional athlete to the person recovering from trauma, physical movement leads to healing, optimal performance, self-confidence, and the ability to make positive strides in life.

We believe that a strong body leads to a strong mind. Our mission is to offer products that help others achieve physical fitness—at every stage of physical health—and experience the life-affirming power of moving with ease and confidence through life.

### **PRODUCTS OFFERED**

## STRENGTH & CONDITIONING

From bounders to yoga blocks, cardio equipment to quad sleds, resistance parachutes to training frames, flooring surfaces and so much more- Square Root Brands brings you hundreds of products to move your mission and your mantra forward.

## REHABILITATION & RECOVERY

Square Root Brands delivers an abundance of products to target every part of the body, designed with a synthesis of science and physiology to support and advance the human condition. Our preferred partner is Hyperice, leading the way in compression, percussion, hot/cold rehab and recovery tools with easy, app-directed operation.

## Facility Supplies

A clean studio or fitness center glimmers with healthy respect for the human body. That's why Square Root Brands markets and distributes Zogics products-a wide range of cleaning solutions and tools, wipes, dispensers and disinfectants that shine and sparkle above all others.

#### **CLEAN GUIDE**

#### **Preparing to Reopen After Difficult Times**

We know that the shutdown is easing in many parts of the country, and the public will want to get back to life as usual, which includes resort travel and trips to the spa. We have been listening to industry concerns and we know that you are worried about rebuilding and growing your business after the crisis. As communities get back to their normal routines, they want to know that the places they travel to are clean and safe. **How can you reassure your clientele that they are entering a safe, germ-and-bacteria-free facility?** 

## We developed the Zogics Clean Guide for Hospitality Facilities, Resorts and Spas for just this reason.

The Zogics Clean Guide toolkit provides hospitality owners and managers with everything from step-by-step cleaning protocols to resources for communicating to clientele that you are following expert recommendations and best practices to deep clean your facility.

By following the steps in this toolkit, you will not only get an expert-informed cleaning protocol, but you will also learn how to build customer trust by highlighting your high standards of cleaning and sanitizing. We know that with the right tools and planning, your facilities will have new and returning clients coming through your (thoroughly cleaned and sanitized) front doors upon your grand re-opening.

#### **Build Trust in Your Cleanliness Protocols**

When your hotel, resort or spa reopens, our "normal" won't be normal any longer. Research indicates that consumers have heightened concerns regarding hygiene, and trust in cleanliness standards will be critical to restarting travel and spa visits. There needs to be a focus on both colleagues and guests of your property with respect to your level of cleanliness.

#### Integrate your cleaning protocol into your staff and customer communications

- Create messaging around the steps you're taking to prevent the spread of germs, and post these throughout your facility.
- Include information about your cleaning practices in member communications, whether through newsletters, email check-ins, or at checkout.\* Not only is this a good way to let your current guests know that you are upholding the highest levels of cleanliness and safety, but this can also be promoted as a selling point for your facility to prospective clientele.
- Get the word out on your social media account

   detailed posts about your current deep cleaning
   practices will show your guests how you're
   continuing to put their health first.
- Be informational and factual about the spread of germs and the necessary standards of cleanliness for your facility, but use uplifting, reassuring messaging to explain your protocols.

#### Lead guests and associates by example

- Be an industry leader in your community—improve and refine your cleanliness protocol to stay on the cutting edge of developments and guidelines.
- Be sure to have plenty of guest-accessible disinfecting wipes and hand sanitizer stations: provide stations at primary entrances and key high traffic areas, for instance, a station to allow guests to wipe the elevator button before pressing.
- Learn to be proactive, rather than reactive by incorporating precautionary measures into your business practices, such as daily/weekly/monthly/annual cleaning protocols, improved internal and external communications, and a dynamic cleaning supplies ordering process like autoship, to ensure your supply of products is steady.
- Consider having one person on property trained as hygiene manager who will be responsible for adhering to new operational guidance and protocols.

## Room-by-room Cleaning Breakdown

<u>Cleaning</u> refers to the removal of germs, dirt, and impurities from surfaces. It does not kill germs, but by removing them, it lowers their numbers and the risk of spreading infection.

<u>Disinfecting/Sanitizing</u> refers to using chemicals, for example, EPAregistered disinfectants, to kill germs on surfaces. By killing germs on a surface after cleaning, it can further lower the risk of spreading infection.

## Lobbies, Front Desks, Entryways & Hallways

**Cleaning & Disinfecting Protocol** 

The lobby and guest service/front desk is the first impression your clientele has when they walk through the door. When your guests return to your facility, it should be practically sparkling. They will want to feel reassured that you have taken every measure to eliminate coronavirus risk and this is your opportunity to show them that you have. This area should be deep cleaned at least once a week. Follow this same procedure for any additional entrances and hallways at your facility.

This area should be deep cleaned <u>once a week</u>.

**11 Step Protocol** 

### Lobbies, Front Desks, Entryways & Hallways

**Cleaning & Disinfecting Protocol** 

#### **CLEAN GUIDE**

#### Start by cleaning (remove dust, dirt, debris) >

- Put on general purpose disposable gloves to be worn throughout the cleaning process.
- Unplug all electronics, such as phones, scanners, computers, before getting started.
- Get your general use cleaning solution ready. We recommend using a cleaner that will work on multiple surfaces.
- Apply cleaner to surfaces by spraying directly onto what you are cleaning, or spraying cleaner onto a microfiber cloth first. Start your cleaning by wiping down all high touch point areas, paying special attention to doors and door handles, countertops, tables, and chairs.
- Now branch out to cleaning those surfaces that are touched less frequently, like brochure holders, merchandise stands, and banners. Make sure that all surfaces have been properly cleaned before moving on to the disinfecting process.

#### Deep clean to disinfect and sanitize

Make sure you have an EPA-registered product that's designated for use against SARS-CoV-2. Our favorite disinfecting & sanitizing products are Antibacterial Wipes and Commercial Disinfectant Concentrate, as well as EvaClean's Protexus Electrostatic Spraying System. Now you'll need to disinfect all surfaces that you have wiped clean. You may need to use a variety of products depending on what furnishings and surfaces sit in the lobby. Always follow manufacturer instructions on the disinfectant to ensure that you are using the product properly.

> Disinfectant wipes are best used for electronics to avoid causing damage to expensive items.

Disinfectant sprays can be used on hard surfaces like countertops and chairs.

- Move aside any tables, cabinets, and shelves so that you can sweep and vacuum floors.

Depending on the type of flooring in the area, you will need to do the following to properly disinfect your lobby floors:

For carpet, we recommend using a soft-surface sanitizer to clean and deodorize. Following the product directions, use a commercial steam vacuum to sanitize the carpet, allowing the carpet to dry completely.

For tile flooring, fill your mop bucket with the proper dilution of Commercial Disinfectant Concentrate. Get the mop wet and wring it so that it is just damp enough to wet the floor. Starting at the back of the room, begin mopping across the room, re-wetting and wringing the mop as needed. Allow disinfectant solution to sit as the floor air dries.

- If there are any rugs or drapery that can be laundered, you should launder these items at the highest possible water temperature based on the manufacturer's recommendations. If these items cannot be laundered, follow the steam cleaning directions from the carpet sanitization process.
- Clean windows and glass doors using a non-streaking glass 10 cleaner and then again with a disinfecting multi-purpose cleaner to fully sanitize the glass.
  - Carefully remove your gloves as soon as you are finished and toss them in the trash. Wash your hands thoroughly for at least 20 seconds in warm water. You should do this every time you finish cleaning and disinfecting an area.

#### Don't forget these high touch point spots:

- Vending machines Door handles
- Countertops & sides Brochure or
- Writing utensils Water fountains
- Front desk surfaces
- flyer displays

## **Guest Rooms**

**Cleaning & Disinfecting Protocol** 

Guest rooms are chock full of high touch-point areas and can be real dirt and bacteria magnets. You will want to clean and disinfect every surface in each guest room. These spaces require a deep cleaning after each check out, following the steps below. For the bath in each guest room, follow the steps in our next section on Restrooms.

This area should be deep cleaned after each check out.

Items you'll need:

### Guest Rooms

**Cleaning & Disinfecting Protocol** 

#### > Start by cleaning (remove dust, dirt, debris)

- Put on general purpose disposable gloves to be worn throughout the cleaning process.
- Remove all linens.
- Using a multi-purpose cleaner, wipe down all tables, chairs, counters, tile, headboards, light switches, vents, and handles. Spray directly on surfaces or use a sponge to apply cleaner. Rinse with water and allow to dry.
- Be as thorough as possible. Take time to clean the closet shelves, the inside of the doors, and the luggage racks. If there are other furnishings in the rooms that don't normally get a deep clean, like cabinets or hampers, those should be deep-cleaned as well.
- 5 Remove all trash from trash cans and receptacles and wipe down those surfaces.
- Sweep or dry mop floors to pick up dust and dirt. Use a wet mop and floor cleaner to remove caked on grime.

#### > Deep clean to disinfect and sanitize

Use an EPA-registered product designated for use against SARS-CoV-2 to disinfect all surfaces that you have already cleaned. Always follow manufacturer instructions on the disinfectant to ensure that you are using the product properly. Disinfectants have specific <u>dwell times</u>, or contact times, in which the surface needs to remain visibly wet in order to kill microorganisms. Empty your mop bucket and fill with the proper dilution of a multi-use commercial disinfectant, wet and wring the wet mop leaving enough solution to thoroughly wet the floor. Starting at the side of the room opposite of the door, begin mopping in a 10 ft by 10 ft area as you work your way toward the doorway. Allow to air dry. If the floor is heavily soiled, repeat. After cleaning and sanitizing the floor and surfaces, clean all mirrors and glass surfaces with non-ammoniated glass cleaner using a fresh, lint-free microfiber cloth or towel.

- For the linens in the room, you will want to launder them with a detergent of your choice at the warmest water temperature recommended by the manufacturer and dry them completely.
- Carefully remove your gloves as soon as you are finished and toss them in the trash. Wash your hands thoroughly for at least 20 seconds in warm water. You should do this every time you finish cleaning and disinfecting an area.

#### Don't forget these high touch point spots:

- Light switches
   TV remotes
   Opor handles
   Thermostate
- Refrigerators
- Hangers

## **Restrooms**

**Cleaning & Disinfecting Protocol** 

Restrooms are breeding grounds for lots of germs and bacteria and getting those germy spaces spotless and sanitized is critically important during your deep cleaning process. Public restrooms should be cleaned multiple times throughout the day, and deep cleaned at least once a week. Guest restrooms should be deep cleaned each time a guest leaves.

Public restrooms should be cleaned multiple times daily and deep cleaned once a week. Guest restrooms should be deep cleaned after each check out.

#### **Restrooms** Cleaning & Disinfecting Protocol

#### > Start by cleaning (remove dust, dirt, debris)

- Put on general purpose disposable gloves to be worn throughout the cleaning process.
- Remove linens in guest restrooms.
- Prepare a multi-purpose cleaner according to the instructions on the packaging.
- Using your cleaning solution, wipe down stalls, handles, faucets, and countertops with a microfiber cloth. At this point, you are focusing on removing the soils that may hold bacteria and germs. Spend some extra time identifying areas of the restroom that are frequently touched, including light switches, buttons on soap dispensers, and even toilet paper dispensers.
- Use a toilet bowl cleaner to scrub toilets and urinals with a toilet brush or toilet swab, paying special attention to the area under the toilet rim and the urinal trap screen. Allow the cleaning solution to sit for up to ten minutes and then rinse by flushing.
- Empty trash cans and trash receptacles by the sink and in every stall, then spray down and clean them thoroughly using your multi-purpose cleaning solution.

#### > Deep clean to disinfect and sanitize

Prepare to disinfect surfaces using an EPA-registered product designated for use against SARS-CoV-2. Zogics Commercial Disinfectant Concentrate is recommended for this step. Always follow manufacturer instructions on the disinfectant to ensure that you are using the product properly. You will either want to use a cleaning bucket and cellulose sponge or spray bottles and microfiber cleaning cloths for this step. Disinfect all surfaces that you have cleaned using your multi-purpose cleaner. Sweep or dry mop floors to pick up dust and dirt. Use a wet mop and floor cleaner to remove caked on grime. Allow to dry.

- Empty your mop bucket and refill with the proper dilution of a commercial disinfectant concentrate. Wring your damp mop so that it has enough liquid to lightly wet the floor. Starting at the back of the room, begin mopping in a 10 ft by 10 ft area, repeating the steps as you work across the room. Allow to air dry. If the floor is heavily soiled, repeat the previous procedure.
- Wipe down all mirrors and glass surfaces such as light covers with a non-streaking glass cleaner and clean microfiber cleaning cloth or towel. Save this step until you are done mopping and spraying surfaces so your clean mirrors stay clean.
- Carefully remove your gloves as soon as you are finished and toss them in the trash. Wash your hands thoroughly for at least 20 seconds in warm water. You should do this every time you finish cleaning and disinfecting an area.

#### Don't forget these high touch point spots:

Door handles

Urinal handles

- Coun
- Toilet handles
- Soap dispensers
  - Paper dispensers Hand & hair dryers

## **Restaurants, Food Service & Bars**

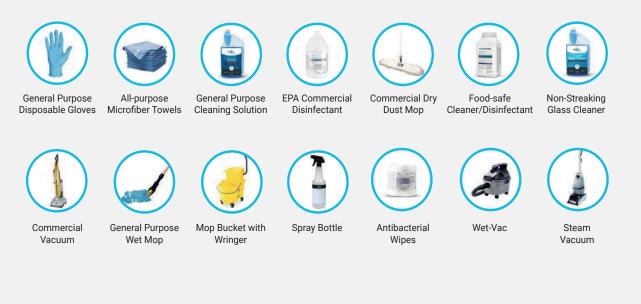

**Cleaning & Disinfecting Protocol** 

For these areas, you'll need to continue to follow established food safety protocols and CDC best practices for retail food establishments and important COVID-19 recommendations. It's imperative to keep these spaces clean and sanitized for both safety purposes as well as for appearances to reassure guests. These areas should be deep cleaned as often as possible.

This area should be deep cleaned <u>as often as possible</u>.

#### **Offices & Business Centers**

Cleaning & Disinfecting Protocol

#### **CLEAN GUIDE**

#### Start by cleaning (remove dust, dirt, debris)

Put on general purpose disposable gloves to be worn throughout the cleaning process.

2 Unplug all electronics, such as phones, scanners, computers, before getting started.

Get your general use cleaning solution ready. We recommend using a cleaner that will work on multiple surfaces.

Apply cleaner to surfaces by spraying directly onto what you are cleaning, or spraying cleaner onto a microfiber cloth first. Start your cleaning by wiping down all high touch point areas, paying special attention to doors and door handles, countertops, tables, and chairs.

Now branch out to cleaning those surfaces that are touched less frequently, like brochure holders, merchandise stands, and banners. Make sure that all surfaces have been properly cleaned before moving on to the disinfecting process.

#### > Deep clean to disinfect and sanitize

Make sure you have an EPA-registered product that's designated for use against SARS-CoV-2. Our favorite disinfecting/sanitizing products are Antibacterial Wipes and Commercial Disinfectant Concentrate. Now you'll need to disinfect all surfaces that you have wiped clean. You may need to use a variety of products depending on what furnishings and surfaces sit in the lobby. Always follow manufacturer instructions on the disinfectant to ensure that you are using the product properly. If you want to get maximum spray coverage, consider using an electrostatic sprayer throughout this process.

Disinfectant wipes are best used for electronics to avoid causing damage to expensive items.

Disinfectant sprays can be used on hard surfaces like countertops and chairs.

Move aside any tables, cabinets, and shelves so that you can sweep and vacuum floors. Depending on the type of flooring in the area, you will need to do the following to properly disinfect your lobby floors:

For carpet, we recommend using a soft-surface sanitizer to clean and deodorize. Following the product directions, use a commercial steam vacuum to sanitize the carpet, allowing the carpet to dry completely.

For tile flooring, fill your mop bucket with the proper dilution of Commercial Disinfectant Concentrate. Get the mop wet and wring it so that it is just damp enough to wet the floor. Starting at the back of the room, begin mopping across the room, re-wetting and wringing the mop as needed. Allow disinfectant solution to sit as the floor air dries.

If there are any rugs or drapery that can be laundered, you should launder these items at the highest possible water temperature based on the manufacturer's recommendations. If these items cannot be laundered, follow the steam cleaning directions from the carpet sanitization process.

Clean windows and glass doors using a non-streaking glass cleaner and then again with a disinfecting multi-purpose cleaner to fully sanitize the glass.

Carefully remove your gloves as soon as you are finished and toss them in the trash. Wash your hands thoroughly for at least 20 seconds in warm water. You should do this every time you finish cleaning and disinfecting an area.

### Exercise Facilities: Weight Rooms

**Cleaning & Disinfecting Protocol** 

Weight rooms are full of equipment that is frequently touched or handled throughout the day by a number of people. With so many hands and bodies touching weight equipment throughout the days, weeks, months, and years your facility has been open, it's no surprise that this area has a lot of health hazard potential. You can treat your guests to a sparkling clean weight room when they return using the following steps. Weight rooms should be cleaned daily, and deep cleaned once a week. As a reminder, encourage staff and guests to wipe down weights before and after each use.

This area should be cleaned daily and deep cleaned <u>once a week</u>.

### Weight Rooms

**Cleaning & Disinfecting Protocol** 

#### **CLEAN GUIDE**

#### Start by cleaning (remove dust, dirt, debris)

- Put on general purpose disposable gloves to be worn throughout the cleaning process.
- Prepare a multi-purpose cleaning solution according to the instructions on the packaging. You will want to use a spray bottle and cleaning cloth with your solution.
  - Using the general purpose cleaner, spray and wipe all weights, bars, and machines, and equipment in the vicinity. Clean all equipment thoroughly. It is not enough to wipe down the top surface of a bench, for example. You should clean the sides, underneath, and along the legs. Use a scrub brush on tough, caked on soil.

Remember that all equipment must be cleaned, including bands, yoga mats, foam rollers, and exercise balls.

Porous equipment like resistance bands can be difficult to clean because the materials are prone to deterioration. You can clean such items in warm, soapy water (using a mild dish soap) and allow them to air dry, or you may opt to replace them before reopening your facility.

#### > Deep clean to disinfect and sanitize

Using a broad spectrum disinfectant, follow label instructions to properly disinfect and sanitize the now-clean equipment. You will want to use spray bottles and microfiber cleaning cloths for this step. Disinfect all surfaces that you have already cleaned using the general purpose cleaner. For maximum effectiveness against viral residue, utilize a handheld electrostatic sprayer to achieve greater coverage of surfaces with your disinfectant.

Remember that to properly disinfect the area, you will need to move equipment out of the way to wipe down and deep clean the weight room floors where sweat and other dirt collects. If the flooring is a hard surface like tile, you should use a dry mop to remove dirt before damp mopping with a disinfecting cleaner.

- Fill a mop bucket with the proper dilution of commercial disinfectant concentrate, wet and wring the wet mop leaving enough solution to thoroughly wet the floor. Starting at away from the doorway, begin mopping in a 10 ft by 10 ft area as you work your way toward the doorway. Allow to air dry. If the floor is heavily soiled, repeating if needed.
- If the flooring is a soft surface, like a mat or rubber flooring, use a broom or vacuum to get rid of dust and dirt.

For mats, use antibacterial gym wipes or a concentrated surface disinfectant to disinfect the surface.

For rubber flooring, wet mop the floor using a solution of rubber flooring cleaner for gyms and allow the solution to soak through for around 5–7 minutes before mopping up the excess water or using a wet-vac. For the deepest clean, use a multi-surface autoscrubber.

- Spray down all weight room mirrors with a non-streaking glass cleaner and clean with a microfiber cleaning cloth or towel. Finish this step by repeating your last process, but this time using a disinfecting all-purpose spray. You should always save cleaning the mirrors for last, to avoid dirtying the glass while mopping or scrubbing down equipment.
- Carefully remove your gloves as soon as you are finished and toss them in the trash. Wash your hands thoroughly for at least 20 seconds in warm water. You should do this every time you finish cleaning and disinfecting an area.

#### Don't forget these high touch point spots:

- Barbells
   Dumbbells
   Benches
   Kettlebells
   Punching bags
- Fitness accessories
   (foam rollers, exercise
   balls, resistance bands)

## Exercise Facilities: Cardio Rooms

**Cleaning & Disinfecting Protocol** 

Cardio machines will need a lot of extra attention during your deep cleaning process. Because cardio rooms house electronic equipment, you will need to take a few extra precautions before getting started with your cleaning to protect yourself and the machines. Cardio rooms should be cleaned daily, and deep cleaned once a week. As a reminder, encourage staff and guests to wipe equipment down before and after each use.

This area should be cleaned daily and deep cleaned <u>once a week</u>.

### Cardio Rooms

**Cleaning & Disinfecting Protocol** 

#### **CLEAN GUIDE**

#### > Start by cleaning (remove dust, dirt, debris)

- Put on general purpose disposable gloves to be worn throughout the cleaning process.
- Unplug all machines that you will be cleaning.
- Prepare your dilution of a general purpose cleaner, or a comparable multi-purpose cleaning solution. You will want to use your cleaner in a spray bottle and have a lint-free microfiber cloth handy.
- Spray the cleaner directly on your cleaning cloth. Use the lightly saturated cloth to wipe down machines. Never spray cleaner directly on the machine. Remember to take some extra time loosening any soil build up around buttons and rails. Be as thorough as possible, including cleaning the base and back of the machine. For electronic panels, we recommend you use cleaning wipes to prevent damage and spray cleaner on the rest of the machine.

#### > Deep clean to disinfect and sanitize

- Use an EPA-registered product designated for use against SARS-CoV-2 to disinfect all surfaces that you have already cleaned. We recommend using our antibacterial gym wipes for your machine electronics. Wipes will help you prevent damage to expensive touchscreens and control panels. Other surfaces can be disinfected with the wipes or a commercial disinfectant concentrate.
- Move machines aside and use a vacuum to pick up dust and dirt. You are preparing to sanitize the floors, so you'll want to get your area as soil-free as possible before moving on to the next step.
  - Instead of a vacuum, you could also utilize a microfiber mopping kit and floor cleaner, to get that sparkling clean look and feel on your hard surface floors.

Depending on the type of flooring in the area, you will need to do the following to disinfect the floors:

For mats, go over the surface with antibacterial gym wipes and allow to dry.

For rubber flooring, use a rubber flooring cleaner and allow the water to soak through for around 5–7 minutes. Mop up excess water or use a wet-vac to remove water.

For tile flooring, fill a mop bucket with the proper dilution of disinfecting cleaner. Using a general purpose wet mop, get your mop damp enough to wet the floor. Starting at the back of the room, begin mopping in a 10 ft by 10 ft area, repeating the steps as you work across the room. Allow to air dry and repeat if the floor still appears dirty.

Carefully remove gloves as soon as you are finished and toss them in the trash. Wash your hands thoroughly for at least 20 seconds in warm water. You should do this every time you finish cleaning and disinfecting an area.

#### Don't forget these high touch point spots:

- Touchscreens
  - Seats (such as on
- Machine handles and rails stationary bikes)
- Control panel buttons

## Saunas & Steam Rooms

Cleaning & Disinfecting Protocol

There's nothing like a sauna and steam room session to help guests relax a little bit. However, saunas and steam rooms bring their own set of challenges for cleaning and maintenance that demands a little extra scrubbing during a deep clean. These spots can house bacteria and viruses, and anything less than a clean sauna or steam room might even be putting your guests at risk. By following these steps, you and your guests will know they are safe to relax once again. Saunas and steam rooms should have a deep clean done once a week.

This area should be cleaned daily and deep cleaned <u>once a week</u>.

7 Step Protocol

Cleaning & Disinfecting Protocol

#### > Start by cleaning (remove dust, dirt, debris)

- Put on general purpose disposable gloves to be worn throughout the cleaning process.
- Prepare your preferred cleaning solution using a mild cleaner, according to the instructions on the packaging. Make sure that your cleaner is appropriate for the surfaces in your sauna or steam room.
  - Using a handheld scrub brush, begin lightly scrubbing the inside of the room. Focus first on those areas that are frequently touched, like benches, backrests, door handles, and even walls. 30 seconds of scrubbing will be enough to get most surfaces clean. You will want to scrub areas that are stained more vigorously to remove the stain. Rinse down the room and allow to dry.

Difficult or stubborn stains on wood can be removed by lightly sanding the area.

Sweep or vacuum floors to pick up any particles that have gotten tracked in. Using your all surface cleaner again, go over the floor using a microfiber mop to remove grime and dirt. Focus especially on getting to those areas under benches where sweat and dirt can collect.

Remove any drain grates or ventilation grates to scrub down with the all surface cleaner. Dry the grates and disinfect them thoroughly using a mister before replacing them.

#### > Deep clean to disinfect and sanitize

- Use an electrostatic sprayer to cover every nook and cranny of the area with an EPA-registered product that's designated for use against SARS-CoV-2. Always make sure that your cleaneris appropriate for the sauna/steam room surfaces to prevent damages. Because disinfectants can be corrosive to steam rooms and saunas, you should use a light touch with your dilution. However, now more than ever you will want to take that extra step to sanitize your rooms for the safety of clientele.
  - Clean glass doors using non-streaking glass cleaner, and then disinfect the glass to fully sanitize the space.
- Carefully remove your gloves as soon as you are finished and toss them in the trash. Wash your hands thoroughly for at least 20 seconds in warm water. You should do this every time you finish cleaning and disinfecting an area.

#### Don't forget these high touch point spots:

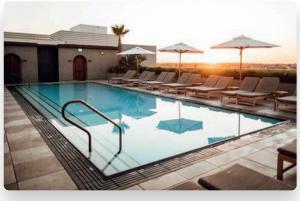

- Backrest
  - Door handles
- Drain gate
- Walls & corners
- Benches & seats

## **Pools**

#### **Cleaning & Disinfecting Protocol**

Often a place where guests relax and unwind, the pool area needs special attention paid to frequently touched surfaces, such as railings, deck chairs and tables. Luckily, the chemicals in the pool water are effective to keep the water clean and bacteria-free. This area should be deep cleaned daily.

This area should be deep cleaned <u>daily</u>.

#### Pools Cleaning & Disinfecting Protocol

#### > Start by cleaning (remove dust, dirt, debris)

- Put on general purpose disposable gloves to be worn throughout the cleaning process.
- Prepare your preferred cleaning solution using an all purpose cleaner, according to the instructions on the packaging.
- Apply cleaner to surfaces by spraying directly onto what you are cleaning, or spraying cleaner onto a microfiber cloth or scrub brush first. Start your cleaning by wiping down all high touch point areas, paying special attention to doors and door handles, shared furniture, tables, and chairs.
- Launder towels according to the manufacturer's instructions.
   Use the warmest appropriate water temperature and dry items completely.

#### > Deep clean to disinfect and sanitize

- Using a broad spectrum disinfectant, follow label instructions to properly disinfect and sanitize the now-clean equipment. You will want to use spray bottles and microfiber cleaning cloths for this step. Disinfect all surfaces that you have already cleaned using the general purpose cleaner. For maximum effectiveness against viral residue, utilize a handheld electrostatic sprayer to achieve greater coverage of surfaces with your disinfectant.
  - Remember that to properly disinfect the area, you will need to move equipment out of the way to wipe down and deep clean the pool room floors where sweat and other dirt collects.

If the flooring is a hard surface like tile, you should use a dry mop to remove dirt before damp mopping with a disinfecting cleaner.

- Fill a mop bucket with the proper dilution of commercial disinfectant concentrate, wet and wring the wet mop leaving enough solution to thoroughly wet the floor. Starting at away from the doorway, begin mopping in a 10 ft by 10 ft area as you work your way toward the doorway. Allow to air dry. If the floor is heavily soiled, repeating if needed.
- Clean glass doors using non-streaking glass cleaner, and then disinfect the glass to fully sanitize the space.

### **Spa & Salon Work Stations**

**Cleaning & Disinfecting Protocol** 

#### **CLEAN GUIDE**

#### Start by cleaning (remove dust, dirt, debris) >

- Put on general purpose disposable gloves to be worn throughout the cleaning process.
- Prepare your preferred cleaning solution using an all purpose cleaner, according to the instructions on the packaging.
- Apply cleaner to surfaces by spraying directly onto what you are cleaning, or spraying cleaner onto a microfiber cloth or scrub brush first. Start your cleaning by wiping down all high touch point areas, paying special attention to your station, rolling carts, drawers and any containers used for storage.
- Launder towels according to the manufacturer's instructions. Use the warmest appropriate water temperature and dry items completely.

#### Deep clean to disinfect and sanitize

Using a broad spectrum disinfectant, follow label instructions to properly disinfect and sanitize the now-clean equipment. You will want to use spray bottles and microfiber cleaning cloths for this step. Disinfect all surfaces that you have already cleaned using the general purpose cleaner. For maximum effectiveness against viral residue, utilize a handheld electrostatic sprayer to achieve greater coverage of surfaces with your disinfectant.

Remember that porous materials cannot be disinfected and ongoing use of disinfectants on materials covering chairs, can damage the material.

On initial opening, feel free to disinfect your chairs, but limit that to once daily.

Consider barrier methods on chairs such as disposable paper drapes or towels that can be laundered after each client.

- If you want to get maximum spray coverage, consider using an electrostatic sprayer throughout this process.
  - Store properly disinfected implements in closed, containers that have also been disinfected (wipe or spray).
- Move to the floor if your flooring is a hard surface like tile, you should use a dry mop to remove dirt before damp mopping with a disinfecting cleaner.
  - Fill a mop bucket with the proper dilution of commercial disinfectant concentrate, wet and wring the wet mop leaving enough solution to thoroughly wet the floor. Starting at away from the doorway, begin mopping in a 10 ft by 10 ft area as you work your way toward the doorway. Allow to air dry. If the floor is heavily soiled, repeating if needed.

Clean glass doors using non-streaking glass cleaner, and then disinfect the glass to fully sanitize the space.

Carefully remove your gloves as soon as you are finished and toss them in the trash. Wash your hands thoroughly for at least 20 seconds in warm water. You should do this every time you finish cleaning and disinfecting an area.
