SPIN CONTROL TECHNOLOGY®

A **PATENTED** surface texture in our iconic Pro Stock® Select and Pro Stock® Leather designed to increase friction between the ball and your glove.

Spin Control Technology® is designed to help you corral the ball and cleanly transfer it to your throwing hand so you can deliver it to your target with speed and precision.

In addition to our on-field work with ball players, we've collaborated with our Pro Stock® Leather Tannery and Aerodynamics experts to create A2K® and A2000® gloves that help players control the ball while making plays faster and more consistently than ever before.

Dimpled texture added to the palm, fingers and occasionally the web.

SUPERSKIN™

SuperSkin™ is a carefully tested and refined microfiber material, perfected to deliver ultimate durability at the lightest weight possible. It repels moisture to keep your glove from getting bogged down by the weight of rain or wet grass. For years, other manufacturers have tried to create their own version of SuperSkin™ using ballistic nylon, molded materials and more—only to come up short time after time.

2X Stronger

50% Lighter

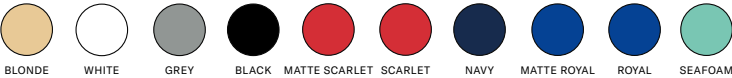

Water Resistant

WORN BY MORE THAN 50% OF PRO PLAYERS

Since the 1990s, countless pros have sworn by their SuperSkin™ gloves. Craig Counsell, who played 16 seasons in the big leagues, is just one example. Aso built him one of the first SuperSkin™ gloves in 1999, and he used it until his retirement in 2011. "Craig Counsell loved the glove so much," Aso said.

WILSON BALL GLOVE MASTER CRAFTSMAN

SHIGEAKI ASO

If you love what you do, you'll never work a day in your life. Few individuals in the world embody that expression as much as Aso, who has dedicated his life to the game he loves.

THAT'S MY GOAL. I DON'T WANT A PLAYER TO THINK ABOUT THEIR GLOVE AT ALL. HIS SMILE IS MY SMILE. IF HE SMILES, I CAN SMILE.

- Shigeaki Aso

Wilson Baseball Master Craftsman Shigeaki Aso has revolutionized the game for generations of players. His initial impact on the highest level of the game came in 1986 when he visited pro camps for the first time. With his decades of industry experience working with hides and leather quality control, he immediately noticed how common infield patterns featured long pinky and thumb stalls that were cumbersome to players.

He gathered feedback from as many players as he could find. One year later, he returned with what is, to this day, the most popular Wilson pattern — the A2000® 1786. From there, Aso developed the A2000® 1787 and A2000® 1788, launching a legendary journey of creating ball gloves.

Aso's initial iconic glove patterns were just the first innovations to come from his relationships with players. Aso has put in countless hours with some of the best to ever set foot on the field. Those collaborative efforts continue to this day with elite talents like Mookie Betts, Tim Anderson and Clayton Kershaw.

Aso credits the still-present language barrier between himself and big leaguers for his detailed understanding of what players are looking for in their gloves.

"I'm not a very good English speaker, which is why I ask questions again and again to players," Aso said. "They explain very honestly what they want. If I spoke English better, would they explain things so well to me? But they make sure to explain everything well because that means they'll get a great glove."

These conversations lead to the constant evolution of Wilson ball gloves, from the groundbreaking development of SuperSkin™ to more recent designs like Flat Finger Binding and Fastpitch-specific patterns and features. All these innovations share one common goal — ensuring that a player never has to think about their glove. It serves as an extension of the athlete, not an accessory.

GAME READY

Grab your glove and get right to work. The A1000® fastpitch glove is game ready from day one thanks to its supple yet sturdy Full Grain leather construction. This series gives rising stars the comfort of a pro caliber glove without the meticulous break in process. These fastpitch designs are curated for softball with a larger pocket, a female-specific fit and a drawstring closure to enable easy adjustments. All components are produced with form-fitting Full Grain leather, resulting in a glove that's easy to control.

DOUBLE PALM CONSTRUCTION (FRONT SIDE):

A thin, perfectly shaped piece of leather placed between the palm liner and outer shell, giving you what matters most: maximum pocket stability.

FULL LEATHER CONSTRUCTION:

Leather shell, laces and pal liner. These ball gloves expertly break in and conform to your hand.

LOW PROFILE HEEL (FRONT SIDE):

Gives more flexibility, opens up the palm and pocket and makes it more forgiving on bad hops.

DRAWSTRING CLOSURE:

Make in-game glove adjustments on the fly and ensure a secure fit in the field. Pull the long rawhide lace to set your wrist closure into place for the perfect fit.

HARDEST BATS IN THE GAME
TRUSTED BY THE BIGGEST NAMES

PRIME

THE DIFFERENCE IS IN THE DETAILS

PROFESSIONAL SERIES FINISH

An enhanced resin material, paired with an ultraviolet light finishing process, results in a bat 30% harder than previous Louisville Slugger Prime wood bats with a mirror-like appearance on gloss models.

UV LIGHT TREATMENT

A specialized ultraviolet lamp generates a chemical reaction within the topcoat to immediately cure and harden the material.

SEAMLESS DECALS

Applied directly under our high-definition top coat, the iconic center brands and back brands blend into the bat almost as intricately as the grain of the wood itself.

PRO HARDENED

Steel rods generate a combination of pressure and heat to compress the wood of the bat and create a denser, harder surface along the entire length of the barrel.

75-DAY LIMITED WARRANTY

Every Prime bat features a best-in-class Limited Warranty that more than doubles our previous 30-day coverage as our mark of confidence in the New Prime Lineup.

WOOD SPECIES

Louisville Slugger is dedicated to crafting wood bats perfect for each player. We offer several wood species, headlined by Maple and Birch. So no matter how you like your lumber, the team at Louisville Slugger has you covered.

MAPLE

The dominant wood species in Major League Baseball, Maple bats are known for their surface hardness, stiffer feel and unmatched sound.

BIRCH

One of the newer, but fastest growing wood species in Major League Baseball, Birch bats feature a surface hardness close to that of maple but increased flexibility

SWING WEIGHT SCALE

Everyone talks about the length and weight of their baseball bat. But swing weight might be one of the most impactful ways to classify bats. Swing weight is a determination of how a bat's weight is distributed along its length. More weight toward the end of the barrel means you're swinging an end-loaded bat. These models create more momentum in a player's swing and generate more power and distance. Evenly distributed weight in balanced bats allow for a potentially greater swing speed for many hitters — perfect for players who focus on bat control and increased contact.

DURA-CORE TECHNOLOGY™ RED CUSHIONED CORK

SUPER SEAM TECHNOLOGY™ FLAT SEAMS

CORES BASEBALL

DURA-CORE TECHNOLOGY™:

Added to Red Cushioned Cork to help the ball retain hardness. Formed to withstand impact and give you the game-changing performance you need.

RED CUSHIONED CORK:

Gives a Wilson® baseball the ability to keep its shape and firmness, allowing for better pop off the bat.

SEAMS BASEBALL

SUPER SEAM TECHNOLOGY™:

With seams 20% higher than raised seam baseballs, pitchers experience superior control on the mound. Fielders can locate the ball quickly in their gloves and throw with more accuracy.

FLAT SEAMS:

The most aerodynamic Wilson® baseball, these balls fly further, giving both pitchers and hitters a true feel of the ball.

M1.J™

CLASS: OFFENSIVE PITCHING MACHINE
LEVEL: TRAVEL

The all new M1.J is the fastball only version of the only version of previous ATEC single-wheel machines. This machine is great for younger age groups and machine pitch leagues, with its lightweight portability and easy setup. With speeds of 30-70 MPH, this will allow the machine user to throw a straight fastball to match any player's abilities. It's built using the same technology, processes and materials as ATEC's other industry leading training machines. Similar to other high-end ATEC® machines, the M1.J is also equipped with a dual-durometer concave wheel. This wheel is engineered to increase the wheel's grip on the ball which maximize both pitch speed and accuracy. The M1.J also features a tilting throwing head, which allows the machine to throw ground balls and fly balls.
